AI Digital Twin Report

mRNA Vaccine Risk Simulation Platform

Generated on: 31 Oct 2026, 06:21 AM

Patient Details

Name	Isha Reddy
Age	3
Gender	Female
ALT (U/L)	70.0
AST (U/L)	20.0
Creatinine (mg/dL)	0.35
CRP (mg/L)	20.0

mRNA Vaccine Risk Predictions

Prediction Type	Risk Level	Confidence
Allergy Risk	Low	81.9%
Side Effect Risk	Medium	80.5%

Overall Risk Level: Medium

Recommendation: Vaccinate Under Observation

RSV Risk Screening

RSV Risk Level: Medium

Result: Precaution

Risk score: 3 / 8 (based on Age, CRP, ALT, AST)

Precautions to take before vaccination

• Ensure the patient is symptom-free (no fever, cough, or wheeze) for at least 48 hours before vaccination.
• Recheck temperature on the day of vaccination — do not vaccinate if fever is present.
• Keep the patient well-hydrated and rested in the days leading up to the appointment.
• Inform the vaccinating doctor about the recent RSV-related lab findings (CRP/ALT/AST).
• Vaccinate only under medical observation, with monitoring for at least 30 minutes after the dose.
• Watch for any allergic or adverse reaction after vaccination and seek care immediately if one occurs.
